SPECIFIC COMMENTS TO AUTHORS

The case report titled "Foreign body granuloma in the tongue differentiated from tongue cancer: Case report" is a well written report on a case of tongue enlargement. There are good quality images and photos added to the text. This report is worth publishing for differential diagnosis of tongue enlargements. I suggest the authors indicate which kind of mesenchymal tumor (lymphoma, hemangioma and etc.) is in the differential diagnosis of this lesion. As you know the most common tongue cancer is SCC which presents as a rough surface mass or ulcer.
