SPECIFIC COMMENTS TO AUTHORS

Barrett's Esophagus in a Patient with Bulimia Nervosa: A Case Report Ahmed Gouda1, Mohamed El Kassas Reviewer's comments; This manuscript showed the complication of esophagus in patients with bulimia nervosa. A few points should be clarified. #1 The endoscopic findings showed GERD, grade D, and the author mentioned the position of the lesion as a lower part of esophagus. We need the actual position and length of the lesion, such as XX cm from incisor to YY cm. #2 Is PPI treatment useful to inhibit GERD and development of the metaplastic changes in the esophageal epithelium to adenocarcinoma in this case? #3 "Gastroesophageal reflux disease" and "Bulimia Nervosa" are better written by lowercase letters. In addition, just only Bulimia on line 147 must be "bulimia nervosa".

SPECIFIC COMMENTS TO AUTHORS

This is a very suggestive case, and it is thought that readers will be interested in reading it. If possible, please attach a picture of the callus on your right hand as a figure. Then it will be a better manuscript.
