#### **SPECIFIC COMMENTS TO AUTHORS**

In my opinion miss in this article is specific examples of how the ecosystem affects mental disorders, but my suggestion completion manuscript: 1. The article is very general, give example... 2. If the authors write about a survey, they should include it 3. the conclusions are also too general, it does not show the scale of the problem global, more most of the world's children (about 85%) live in low- and middle-income countries, which tend to be in geographic locations more vulnerable to the impacts of climate change. These developing nations also tend to have weaker mental health care infrastructure and fewer support services with which to prepare for and adapt to the impact of climate change. 4. It is important how to influence the decision-makers who are even more crucial for ensuring health equity for children and adolescents globally, pertaining to eco-anxiety.

#### **SPECIFIC COMMENTS TO AUTHORS**

The review shows that child mental health professionals have an extremely important role to play in their different roles as clinicians, therapists, researchers, policy makers, advocates, preventative public health professionals and service developers pertaining to eco-crisis & the children and adolescent population. It also offers various suggestions for all these roles. It is thought that this study, which draws attention with its original subject, will bring a biopsychosocial perspective to child mental health professionals.

#### **SPECIFIC COMMENTS TO AUTHORS**

The review shows that child mental health professionals have an important role to play in therapists, and service developers pertaining to eco-crisis & the children and adolescent population. I believe that this study highlights an important topic that little is known about, which is the health effects of a polluted climate and the perception of an ecological crisis by vulnerable young people. It is important to help children and young people as well as their families to learn implemented programs at local, national, and international levels support actively engaging children and adolescents in increasing awareness of climate change, promoting renewable energy, developing environmentally sustainable practices, and advocating for urgent action on the climate crisis.
