SPECIFIC COMMENTS TO AUTHORS

The hypotheses of this study is that the human chorionic gonadotropin (β -hCG) and estrogen stimulation could play a promoting role in the growth and diffusion of DTC during pregnancy. The new findings of this study is still under debate whether it is possible to combine optimal timing for treatment to ensure the best possible outcome with reduction of fetal complications and risk of cancer growth. The unique insights and the key problems in this field has not been solved in this study. It should be monitored human chorionic gonadotropin (β -hCG) and estrogen multiple times during follow-up.

SPECIFIC COMMENTS TO AUTHORS

Dear Authors, Thank you for conducting this case report entitled "Therapeutic challenges in metastatic follicular thyroid cancer occurring in pregnancy" for possible publication in the esteemed journal "World Journal of Obstetrics and Gynecology". You need to correct the following points: 1. How is the fetus delivered, natural delivery or cesarean section? How many gestational weeks is the delivery time? Is there anything special about the fetus? 2. Has the blood test been done only once? Is there any more data? For example, before pregnancy and during prenatal examination. 3. We don't know when the thyroid tumor occurred and the progress during pregnancy, so there is no direct evidence for the statement "Human chorionic gonadotropin (β-hCG) and estrogen stimulation could play a promoting role in the growth and diffusion of DTC during pregnancy. " 4. "gluteal mass resulting FTC metastasis" The statement is not right. It should be "FTC metastasis resulting gluteal mass". 5. Throughout the MS the writing should be polished by addressing some minor grammar issues.

SPECIFIC COMMENTS TO AUTHORS

This case report on Therapeutic challenges in metastatic follicular thyroid cancer occurring in pregnancy is actually significant and the construction of this case report is clear, conform to the requirements of World Journal of Obstetrics and Gynecology. Furthermore, the English used is often incorrect and a thorough editing of almost all sections is necessary to make the text readable. Please consult a native speaker for content editing. Below suggestions of alterations are made, however even after processing all of these comments, an additional check by a native speaker is necessary. The manuscript is further revised and can be published.
