SPECIFIC COMMENTS TO AUTHORS

Dear Authors, Thank you for conducting this study entitled "Prevalence and factors associated with non-adhesion to therapy among partners of pregnant women with syphilis" for possible publication in the esteemed journal " World Journal of Obstetrics and Gynecology". The manuscript describes a relationship of the nurses with their families in COVID-19 pandemic period. I have the following comments: 1. The manuscript needs minor corrections of the English language and editing. 2. The title should include the place of the study. Besides, "adhesion" should be replaced by "adherence". 3. The abstract is well written, summarize, and reflect the work described in the manuscript. However, it needs to address the following: a. Instead of this sentence "Statistical analysis was performed using the EPI-INFO statistical pack version 7.1.5.2" you must add some details about the "METHODS" section. b. RESULTS You should not start this section by a number. Please add the exact Odds ratio. 4. The keywords should be separated from each other by a semicolon. Besides, you can add other keywords like pregnant women and prevalence. 5. Core tip: from northeastern Brazil" change to " of northeastern Brazil" 6. Introduction: this section is well written, gives a nice overview, and the objectives of this study are well illustrated. However, the following should be addressed: a. Each paragraph should be started after an appropriate space. b. *Treponema pallidum* should be written in italics "*Treponema pallidum*". c. "as causer agent" changed to "as a causative agent". d. I think you missed the reference number 7. e. "(Hildebrand 2010; São Paulo 2016)." Why you write like this instead of mentioning the number of the reference. f. "From 2012 to 2017, 62% of the partners of pregnant women with syphilis were not treated in that country [13]." I think the word "that" should be

replaced by "this". g. "It is expected that the data from this study may contribute to the implementation of measures to attenuate the impact of the syphilis over the population." It is better to remove this sentence from the introduction. 7. Materials and methods. a. You didn't mention the name of the study city. b. I think it is better to present the inclusion and exclusion criteria by a flowchart. c. "18 years old" change to "18-years-old". d. Write the full term of the SPSS, and the city and country of the SPSS version 21. 8. Results: a. What you mean by the percentage in this sentence "most women (percentage)"?. b. I see some percentages are written exactly, while others are written approximately. Please unify them according to what they are written in the tables. Examples: 10 pregnant women (22%) and 73.91% (n = 34). 9. Discussion: the following should be addressed: a. The paragraphs should be started with appropriate spaces. b. I see you focus mainly on your discussion on local studies from Brazil. Therefore, more international studies should be included in the discussion. c. Paragraph 2: I think there is a missed word after the word "according" "According Figueiredo et al." d. Paragraph 4: instead of (Brazil 2020b) put the reference. 10. Table 1: I think there is a wrong calculation of the Beginning of the prenatal care ($32 + 13 = 45$), while the total number is 46. 11. Table 2: same as above mentioned point. Last attendance to a medical consultation**** ($18 + 25 = 43$). Moreover, please mention the total number of each item to be clear to the readers. 12. Figure 1: What you do if the partner was found only?
