SPECIFIC COMMENTS TO AUTHORS

Comments on 75598 Manuscript No.: 75598 Title: Delayed inflammatory reactions associated with rhinoplasty using alloplastic implant after COVID-19 vaccination: A case report World Journal of Clinical Cases In this study, the author has studied "Delayed inflammatory reactions associated with rhinoplasty using alloplastic implant after COVID-19 vaccination: A case report." The manuscript is interesting and well written. Sentence making is good in this manuscript. However, the English language used in the manuscript needs minor improvements as there are some punctuation and grammatical mistakes present throughout the manuscript. The figures required the proper explanation and caption. Moreover, research models are not discussed in an understandable manner, and the introduction section is poorly followed by literature, which reflects that the author needs a more comprehensive way of thinking. But the results are very good and presented well. It is obvious that the quality of the manuscript does not fulfil the standards of the journal, therefore, should be reconsidered after major revision. Specific comments: 1. Please revise the title and make it more attractive. 2. Page 3: "As there was no improvement in the patient's condition after administration of non-steroidal anti-inflammatory drugs and antibiotics..." Please add the names of drugs and antibiotics that are used for treatment. 3. The Abstract needs to be critically revised, there are a few grammatical mistakes, and the results are not well presented. 4. Please add more strong keywords. 5. Page 5: The whole introduction section is general. Authors are advised to revise the introduction section carefully and add more data to make an association between each sentence to support the problem statement. It is advised to add literature in introduction section to create a research gap. 6. Page 5: What is the novelty

of the present study? 7. Page 7: "He was administered non-steroidal anti-inflammatory drugs and antibiotics once each in the emergency room." Please add the exact quantity of drug administration. 8. Page 8: "He was then transferred to our hospital to undergo a revision surgery under general anesthesia." Please add the name of the hospital. 9. The discussion section is not up to the mark; the authors only discussed the literature without any information on the results. No overall limitations are added. 10. The conclusion section could be in a single paragraph and without any reference. 11. The present study lacks future recommendations. 12. The figures need proper interpretation and appropriate captions.
