SPECIFIC COMMENTS TO AUTHORS

This case report has the objective to emphasize the rare presentation of Ewing sarcoma in the small intestine and the importance of the differential diagnosis of adult intraabdominal tumors. The text of the manuscript is concise, but is very simplistic. The addition of the photos of the resected surgical specimen would be valuable, and the in discussion session should be enriched with the recent references regarding extraskeletal Ewing sarcoma.

SPECIFIC COMMENTS TO AUTHORS

This paper reports a rare case of ewing's sarcoma of the ileum with multiple organ metastases. This study provides valuable information for the differential diagnosis of ileum tumors, mainly radiographically and pathologically, and has important implications for expanding the disease spectrum of ileum tumors. However, this paper also has some limitations. It can be seen from this paper that the diagnosis of cases mainly relies on pathological diagnosis, but this paper does not provide detailed basis for differential diagnosis in pathological aspects, so pathological analysis considering other diseases should be added. In addition, the literature review is not well reflected in this paper, so it is suggested to delete the description of the literature review in the title, or add relevant literature review content in the text (for example, add the review of the metastasis rate of other organs with multiple metastasis of ewing's sarcoma extraosseous with multiple metastasis, and present it in table form). Finally, the follow-up of patients' treatment is not perfect enough, and patients should be actively followed up during their survival after discharge to supplement relevant palliative care. I believe that the manuscript will be better after the relevant descriptions are enriched and enriched.

SPECIFIC COMMENTS TO AUTHORS

This paper describes an interesting case of ewing's sarcoma of the ileum withmetastasis. It is an interesting subjuect for understanding ileum tumors. Nevertheless, it presents some limitations. It needs more info in the possible differentials - radiological data and pathological information. The literature review is superficial, and should discuss the metastatic forms of the disease, and other simillar reported cases.

SPECIFIC COMMENTS TO AUTHORS

Comment: A well written concise report which is informative. The authors must note that the case is radiologically difficult to diagnose so must highlight that in introduction and clarify in abstract. The following suggestions will add to the papers content. 1.

‘Ewing sarcoma (ES) is a rare aggressive variant of small round cell tumors and is an uncommon malignancy that usually occurs in childhood.’ The above opening statement is widely incorrect. Reframe as ‘Ewing sarcoma (ES) is an aggressive small round cell neoplasm reported in younger children and young adults. Its occurrence in elderly is rare.’ It is reported to be 2% of all cancers reported between age of 15-19. [Statistics adapted from American Cancer Society's (ACS) publication, Cancer Facts & Figures 2021, and the websites of ACS and St. Jude Children’s Research Hospital. Additional source was Seigel R, et al.: Cancer Statistics 2021. CA: A Cancer Journal for Clinicians. 2021 Jan; 71(1):7-33. doi/full/10.3322/caac.21654 (sources accessed January 2021).]

2. The authors must clarify that ES is difficult with widespread mets is difficult to distinguish radiologically or clinically whichever they wish to emphasize. ‘ES of the ileum with wide multiorgan metastases is rarely reported and difficult to distinguish from other gastrointestinal tract tumors.’ Add word radiologically in the above statement. 3. Typographical error ‘periileum.’ Must be peritoneum I believe 4. As histomorphology and IHC was diagnostic in the present case the authors must include an image collage including at least 2 positive and 1 negative marker. 5. The discussion is well written but the authors in their title emphasize ‘review of literature’. The above is lacking. A small paragraph accompanied by a table which tells about the exact site of gastrointestinal EOES, age of presentation, reporting author and year of report will add

to the discussion and make it more interesting
