SPECIFIC COMMENTS TO AUTHORS

I have gone through the article by Zhao et al with great interest. Authors have described a case of bile duct injury caused during Endo-GIA transection of Glissonean while performing right hepatectomy. The article highlights possibility of iatrogenic bile duct damage due to inappropriate endo GIA application. The article gives an important clinical message. My comments regarding the article are as below- 1. Language editing is needed throughout the article 2. Figures- marking and labelling is not properly visible in some of the images- please fix it 3. Discussion- There are few repetitions. Please edit it 4. Kindly include previously reported cases in the medical literature- their presentation, management etc. 5. How was the right portal vein transected? Please mention it in the treatment section.

SPECIFIC COMMENTS TO AUTHORS

it is my pleasure to thank the whole team to bring such a case into the light. There are few suggestions that may help to further improve the manuscript. In case summary line 41 and 90, T-bil word has been used. Please avoid non standard abbreviations Line 86 need space between percussive pain. Fig 1: labels inside the images are not clear. Fig number specially alphabets mentioned inside the images are not clear (focus on alphabet E) There are few grammatical errors throughout.
