### **SPECIFIC COMMENTS TO AUTHORS**

The authors report the first case of IAPN associated with NEC. Cases of impulsive complications of mixed neuroendocrine-nonendocrine neoplasia and two different tumors are extremely rare; in addition, the histopathological findings after resection were examined in great detail. I have included several comments below and ask that you respond to them carefully. 1 . It is difficult to accept that a tumor that was negative for chromogranin became a neuroendocrine tumor. I request that the objectivity of the pathological diagnosis be ensured by a second opinion. 2 . Did this patient underwent pathological examination of the liver metastases by liver biopsy?

### **SPECIFIC COMMENTS TO AUTHORS**

1. It is a good case and review of rare tumor. 2. But, it does not add to any information in the management or clinical practice. 3. The combinations of various cell lines are possible at ampulla , but still surgery remains the first choice. Endoscopic resection as alternative treatment depending on the clinical circumstances. 4. Adjuvant treatment is always considered at more dominant cell line. 5. So, no further information is added to clinical management by the article.
