SPECIFIC COMMENTS TO AUTHORS

Dear Authors, Thank you for conducting this study entitled "Metastatic low-grade endometrial stromal sarcoma with variable morphologies in the ovaries and mesentery: A case report" for possible publication in the esteemed journal "World Journal of Clinical Cases". The manuscript can be accepted for publication after major revision because of the following comments: 1. Minor editing and language corrections are necessary. 2. The abstract is too short (95 words) and didn't describe the case well. We advise to rewrite it again to be more informative. 3. Case presentation a. Physical examination upon admission: needs more detail. b. Figures: 1. The figures are not sufficient to describe the case. Therefore, images of the patient with the mass, CT findings, and intraoperative images are essential to support the presentation of the case. 2. The number of the three figures is not mentioned in the text. c. Surgical exploration: you must say who participated in the operation (for example, gynecologist and general surgeon). d. The paragraph in line 134 should be moved to the previous one. e. You said "The patient was discharged and did not complain any complications." Please, specify the exact date of the discharge. f. Line 174: followed up→ followed-up g. The follow-up period is short for such a dilemma case. Besides, you didn't mention how frequent you saw the patient following the surgery. Therefore, it is advisable to rewrite it again. 4. References: The references in the text should follow the journal style.

SPECIFIC COMMENTS TO AUTHORS

Authors showed a case of LGEES developing extensive extrauterine 20 years after primary resection. This case report was rare and interesting. This case report will be better after clarification of several issues. 1. Histological pattern or immunohistochemical profiles of primary or metastatic sites should be shown as a table. 2. Clinical course after resection such as liver injury or response to endocrine therapy should be mentioned more detail.
