

Supplementary Table 1. Reported cases of chest wall cutaneous bronchial cysts in the literature.

Case	Sex	Age at initial presentation	Infection or not	Outcome	Reference
1	male	14 m	+	Incision and drainage, subsequent surgical removal of the fistula	[1]
2	female	6 y	+	Surgical excision and resolution	[2]
3	male	30 y	-	Surgical excision and resolution	[3]
4	male	34 y	-	Surgical excision and resolution	[4]
5	male	41 y	-	Surgical excision and resolution	[5]
6	male	3 y	-	Surgical excision and resolution	[6]
7	male	3.5 y	-	Surgical excision and resolution	[6]
8	female	23 m	-	Surgical excision and resolution	[7]
9	male	42 y	-	Surgical excision and resolution	[8]
10	female	17 m	-	Surgical excision and resolution	[9]
11	male	10 y	-	Surgical excision and resolution	[10]
12	male	4 y	-	Surgical excision and resolution	[10]
13	male	41 y	-	Surgical excision and resolution	[11]
14	male	18 y	-	Surgical excision and resolution	[12]
15	male	20 y	-	Surgical excision and resolution	[13]
16	female	7 y	-	Surgical excision and resolution	[14]

m: month; y: year; +: infection; -: without infection
