SPECIFIC COMMENTS TO AUTHORS

The topic of the article is within the scope of the journal and the results are interesting. However, the article cannot be accepted in its current state as it is unstructured. It should follow a standard structure like the following: Introduction, materials and methods, results, discussion and conclusions.

SPECIFIC COMMENTS TO AUTHORS

Firstly, thank you for opportunity to review very interested article. I don't feel qualified to judge about the English language and style due to not native language. 1. The title reflect the main subject about ECMO in post-operative of the modified Fontan operation, title was clear and easy to understand. 2. The abstract summarize and reflect the work described in the manuscript. 3. The key words reflect the focus of the manuscript. 4. The manuscript adequately describe the background, present status, and significance of the study. The authors explain Fontan operation in first part of manuscript. 5. The information of case report was demonstrated, However, in physical examination part, I suggested the authors to give more detail EX: vital signs or heart and lungs examination. 6. The manuscript interpret the findings adequately and appropriately, highlighting the key points concisely, clearly, and logically. 7. Tables and figures sufficient, good quality and appropriately illustrative of the paper contents. 8. The manuscript cite appropriately the latest, important, and authoritative references in the introduction and discussion sections. However, some of references were incorrect style for this journal.
