SPECIFIC COMMENTS TO AUTHORS

Dear author Thank you for the submission of your article to our journal. I've just read your paper and felt many problems in this case report as follows; The sentence "we address a fatal pseudoaneurysm presenting with persistent epistaxis and its appropriate management." is a little strange. Pembrolizumab is not a chemotherapy agent. In the chemotherapy, the expression "4th round" is not appropriate expression. What is the complication "hearing"? Abbreviation of fractions should be frs. How much dosage of the radiation therapy could be administered to the local field after the recurrence? You should full spell the abbreviation at its first appearance even if the word is MRI. In Fig.1., you should explain the findings of necrosis. "an emergency measure" should be corrected as "an emergency measures". This paper does not need details of coil embolization procedures. You should at least speculate why this case developed re-bleeding after presumed complete coil embolization.
