SPECIFIC COMMENTS TO AUTHORS

This article by Wei Shen and Lianping pointed out the crucial issues of the study by Robert S Sandler, such as factors influencing the conclusion and whether oral contraceptives can reduce the risk of microscopic colitis. The authors also raised limitations of the telephone interviews and self-completed questionnaires, including the authenticity of the data. Taken together, the authors emphasized the caution in the reliability of Sandler's conclusions. Thus, the readers should interpret the study results with caution. This article can be useful for the readers. Comments/suggestions 1. The abstract can be more concise. "The relationship between obesity and female risk of microscopic colitis remains to be discussed." is sufficient.

SPECIFIC COMMENTS TO AUTHORS

I was honored to review the manuscript entitled: Anti-obesity effect of Eucalyptus leaf extract containing oeno-thein B in healthy Japanese adults: A randomized, place-bo-controlled, double-blind, parallel-group study submitted to Nutrients. The study presents high quality and deals with important clinical issue, such type of study is needed. I have only few small remarks that authors should address properly. I recommend to accept the manuscript after minor revision. There are only some points to correct: - please provide the list of abbreviations - please provide the number of ethical approval • - introduction and discussion section need improvement; please provide information on how your results will translate into clinical practice; doi 10.1039/d0fo01878c ; <https://doi.org/10.3390/jcm9020469> - in discussion section please provide study strong points and study limitation section - please correct typos All abovementioned issues are crucial for the credibility of the results. The paper can be accepted only after addressing all the issues and another subsequent review. I recommend to accept the manuscript after minor revision.
