SPECIFIC COMMENTS TO AUTHORS

To start with lots of grammar and language mistakes are there and the manuscript must be revised by a native English speaking expert. In the abstract we cannot mention during the era of COVID that RSV is the most common viral cause of lower respiratory tract infections without referring to SARS Cov2 In the methods section please clarify that PCR was done on what samples??? In the results there was no mention of respiratory distress as a very common presentation of acute bronchiolitis although shown in Figure 2. The fever has to be detailed as low grade fever or high grade fever A panel test including IgG and IgM for Legionella and Mycoplasma and Coxiella cannot be designated viral serology profile. What antibiotics and antipyretics given to these patients? Could they be a cause for impaired liver function?

SPECIFIC COMMENTS TO AUTHORS

This is a good retrospective study highlighting prevalence of liver involvement in children with bronchiolitis, specially with paucity of data available on this subject. I have some questions regrading the study as outlined here. I have attached the file for the authors and you can see my comments and edits when you open it in the review mode.
