SPECIFIC COMMENTS TO AUTHORS

A good use of combination therapy with immunotherapy and chemotherapy, but the case report is let down by the large number of grammatical errors Was a ethical committee clearance obtained ? as this is not the standard of care and is an experimental therapy

SPECIFIC COMMENTS TO AUTHORS

The case report entitled “Tislelizumab Combination with Chemotherapy Successfully Converted Unresectable Advanced Penile cancer into Complete Surgical Excision: A Case Report and Literature Review” by Dr. Long and colleagues, reports on a case of a 58-year-old male with locally advanced Penile squamous cell carcinoma (PSCC). with bulky, fixed inguinal lymph node metastasis complicated within genital skin ulcers, who completed inguinal lymph node dissection and achieved pathologically complete response via conversion therapy by immunotherapy plus chemotherapy. The text is in general interesting, clear and easy to follow. However, more introductory notions should be included. Moreover, more supporting references and notions in the field should be included. I have a several observations, and I am therefore recommending a major revision (please see below for additional comments for improving the ms). Comments 1. More information on Penile cancer etiopathogenesis, mutational burden, therapy and prognosis should be included. For instance, a fraction of cases are HPV-driven. 2. More supporting references should be included, for instance here “but multiple small size cohort studies have demonstrated that nearly half of patients do not benefit from neoadjuvant chemotherapy alone, which made it urgent to find new and effective treatments.” However, additional sentences spread throughout the text are lacking in supporting references 3. immune checkpoint inhibitors (ICIs) represent a promising therapeutic approach as stated (DOI: 10.3389/fonc.2022.832047). For completeness of information, this notion and supporting reference should be included 4. Introduction the correct name is Programmed cell death protein 1 (PD-1) 5. Sections should be separated with a space 6. CASE PRESENTATION section, “21 days after surgery” I

discourage starting a sentence with a number 7. Figure 1 is not mentioned in the text, while it should be mentioned and described 8. Several sentence are in gray instead of black. Please fix this problem
