SPECIFIC COMMENTS TO AUTHORS

Nice case report. Few areas which will need clarification. Did we had the MRI L-s spine in view of lower extremities weakness, in addition did we have the Nerve conduction study and EMG so as to have documented area of involvement and recovery. How did we ruled out the other causes and what objective testing we did to r/o other etiologies
See the grammar correction in the attached file

SPECIFIC COMMENTS TO AUTHORS

this was a case report of hepatic myelopathy, an uncommon condition that can occur in patients with cirrhosis and persistent encephalopathy. Although uncommon, this is not a very rare presentation, and several other cases have been reported. Minor comments - EMG should be reported - I think that MRI should be used not for diagnosis but for ruling out other causes of this condition. This point should be discussed. Moreover, I think that figure 2 is not so informative. - There are several typos throughout the manuscript - I do not understand what is portal main artery embolism (figure 1) - Was portal vein thrombosis treated with LMWH or anticoagulation
