SPECIFIC COMMENTS TO AUTHORS

Although antiviral treatment for hepatitis B and hepatitis C has made great progress, chronic liver disease is still a heavy burden to the society worldwide, mainly due to the epidemic of NAFLD, alcohol addiction and the lack of treatment methods for end-stage liver disease. The authors reviewed the epidemiology, diagnosis and treatment of chronic liver diseases from. It is an interesting topic, with qualified content and certain practicality. However, there are still several issues need to be improved: 1. Portal hypertension and hepatocellular carcinoma are should not be the focus of the topic; 2. Autoimmune liver disease is classified into two main types, AIH and PBC, with different pathogenesis and progress; 3. The relationship between antibiotic abuse and AIH is a clinical finding, which can be highlighted; 4. Some hereditary liver diseases, such as Wilson disease and primary biliary atresia, are also important composition of chronic liver disease; 5. Also need to pay attention to drug-induced liver injury.

SPECIFIC COMMENTS TO AUTHORS

The manuscript is well-written and up-to-date. I have few observations: the list of abbreviations is disorganized which makes it difficult to locate the abbreviations. In the abstract the authors use the abbreviations and not the name. I also noticed in the text the use of acronyms not preceded by the name at any time in the text.
