SPECIFIC COMMENTS TO AUTHORS

• Needs professional English editing. • Change the title to: "2022 Monkeypox outbreak: Why is it a public health emergency of international concern? What can we do to control it?" • Add "Methods" section about Literature search and criteria. • Write the full term of (Sexual transmitted infections), then put the abbreviation (STIs) in parentheses in the "abstract" and "How is it spread" paragraphs. • (How does it spread) instead of (How is it spread). • Mention to how monkeypox virus DNA was found in the semen of just some patients, and this isn't enough evidence to call it a STI. • (How serious is monkeypox) instead of (How serious of monkeypox is). • Use the abbreviation (MPX) in all paragraphs. • (A disease outbreak is endemic when it is consistently present but limited to a particular geographic area or region) instead of (Endemic disease shows the disease is continuously present in a particular geographic area or region). • What is concluded is already in the literature, write your own conclusion.

SPECIFIC COMMENTS TO AUTHORS

It is timely to discuss on the monkeypox outbreak. However, current version of the manuscript is lack of academic profoundness and originality. It would be appropriate to reduce the general introduction part of monkeypox characteristics and focus more on the new findings of current monkeypox outbreak and solutions to tackle it. There are several errors that should be corrected. 1. Jynneos is same product of Imvamune(marketed in Canada) and Imvanex(marketed in EU) that all manufactured by Bavarian Nordics. 2. There are more than 2 vaccines available in worldwide. (such as CJ-50300 in Korea, LC16 in Japan). There are several parts that I want to discuss on. 1. "People are educated to reduce the risk of exposure and to reduce the number of sexual partners especially new partners, to avoid contacting travelers from epidemic areas " -> Isn't is too broad or even feasible to avoid any contact from the travelers from the epidemic countries? Now United States and most of the EU countries are epidemic countries. 2. "the WHO emergency committee held another expert meeting to discuss the monkeypox epidemic, the panel did not formally vote, six members were in favour of declaring a PHEIC, nine were against, considering the outbreak is an extraordinary event and the disease is a global public-health risk , WHO director-general Tedros Adhanom Ghebreyesus declared monkeypox had constituted the PHEIC on 23 July, that poses a risk to multiple countries, and requires a coordinated international response" -> It would be better to discuss why WHO declare PHEIC although nine were against to that decision. Minor revisions 1. You should state the full name when you abbreviate in the first time. (ex, MPX, CDC) 2. there are typos (ex, vesicular disease1)

SPECIFIC COMMENTS TO AUTHORS

It is timely and meaningful to review the current outbreak situation of monkeypox and the way to respond. It seems the authors properly reflected previous review comments. However, it is still needed to have professional language editing once again before publication. There are several typos should be corrected. (ex ourbreak, o f, 2 wk)
