### **SPECIFIC COMMENTS TO AUTHORS**

There are nearly ten publications of reviews about PEP following ERCP. Among them, the article titled as "Non-steroidal anti-inflammatory drugs, intravenous fluids, pancreatic stents, or their combinations for the prevention of post-endoscopic retrograde cholangiopancreatography pancreatitis: a systematic review and network meta-analysis" (PMID: 34214449 DOI: 10.1016/S2468-1253(21)00170-9), has systematically discussed the efficacy of combined treatment. So, it is not logical for the author to describe that "To date, there are no established methods to estimate the synergistic effect of the independent risk factors on post-endoscopic retrograde cholangiopancreatography (ERCP) pancreatitis (PEP), and evidence of the efficacy of the combination of prophylactic measures for PEP is scarce." More importantly, the present manuscript does not discuss the synergistic effect of the independent risk factors on PEP. Please add the important content. So, the manuscript did not exhibit its novelty.

### **SPECIFIC COMMENTS TO AUTHORS**

It is an essential contemporary topic and is well addressed in this manuscript. The manuscript, I presume, will enrich current knowledge on this topic. However, I would suggest minor alterations to the manuscript title to make it more appealing. Suggested title: Current approaches and questions yet to be resolved for the prophylaxis of post-endoscopic retrograde cholangiopancreatography pancreatitis.

### **SPECIFIC COMMENTS TO AUTHORS**

A mini review but well compiled. The following are the suggestions to improve the manuscript: 1. All guidelines on the subject to be out in a tabular form 2. Summary of important systematic reviews and meta analysis to be provided 3. The following references be added to enhance the discussion : a. Choudhary A, Bechtold ML, Arif M, Szary NM, Puli SR, Othman MO, Pais WP, Antillon MR, Roy PK. Pancreatic stents for prophylaxis against post-ERCP pancreatitis: a meta-analysis and systematic review. *Gastrointestinal Endoscopy* 2011; 73(2): 275-282 b. Fan JH, Qian JB, Wang YM, Shi RH, Zhao CJ. Updated meta-analysis of pancreatic stent placement in preventing post-endoscopic retrograde cholangiopancreatography pancreatitis. *World J Gastroenterol.* 2015 Jun 28;21(24):7577-83. c. ### **SPECIFIC COMMENTS TO AUTHORS**

The simple review by Saito H. et al summarized current measures to prevent PEP. However, the review was not well structured and many important factors were missing. 1. Some content in the "Risk factors" section and "Patients selection" sections are repetition. 2. The role of endoscopists in the development of PEP should not be included in patients selection. 3. The role ERCP techniques (EPT vs large balloon dilation, the duration of balloon dilation, et al.) were missing. 4. Hydration lacks references to further discuss it. 5. The type of NASID may also plays a different role in preventing PEP (indometacin vs indometacin). 6. The controversial role of somatostatin should be discussed. 7. The authors should draw a flowchart to clarify how to prevent PEP, from patient selection to post-ERCP measures. 8. Most importantly, many reviews have been published on this issue and nothing new found in this review.
