SPECIFIC COMMENTS TO AUTHORS

Regarding the manuscript: Comment on "Multimodality imaging and treatment of paranasal sinuses NUT carcinoma: A case report" The authors reported a rare case of paranasal sinuses NUT carcinoma which was diagnosed by computed tomography, magnetic resonance imaging, fluorescence in situ hybridization (FISH) and immunohistochemistry. This case report seems to be meaningful in clinical practice to remind that the possibility of NMC should be considered for patients with rapidly progressing sinus tumors and poor response to initial treatment, and additional immunohistochemical staining with anti-NUT should be performed as soon as possible. However, I suggest that this manuscript could be supported by the following minor corrections. - In page 3 and 5, the authors described "Heat therapy plays an important role in the treatment of tumors.", however, this comment may not be supported by this case and suggested reference 4. Moreover, the authors mentioned "The efficacy of heat therapy cannot be determined yet." in page 4. Thus, I recommend a correction to more appropriate description. - In page 3 and 4, "acoustic dynamics" was mentioned several times, for which the addition of explanation of "acoustic dynamics" may be recommended for easy understanding of readers. -It looks that the stylistic improvement in English expression is needed for the most part. I hope that my comments could be helpful for both authors and readers and appreciate for the patience of editors.

SPECIFIC COMMENTS TO AUTHORS

Dear author Thank you so much for presenting rare cases and using multi-modality for diagnostic and stage paranasal sinuses NUT carcinoma and how to treat it. But there is one thing that I would like to suggest. It is also necessary to show the potential energy (kVp) of the CT-Scan because the HU value depends on the X-ray energy. Reviewer
