SPECIFIC COMMENTS TO AUTHORS

This study introduces Crohn's disease from the aspects of surgical indications, serious complications, clinical factors affecting the timing of surgery, and the value of early intervention. Figure 1 is beautifully created and valuable. But, unfortunately, I can't feel the innovative value of this research. In addition, the author should explain the future research direction at the end. The author can also consider adding more pictures or tables to help sort out ideas.

SPECIFIC COMMENTS TO AUTHORS

I would like to congratulate the authors on this extensive review of Crohn's disease therapies. Authors are recommending early surgery but I would like more details about quality of life following surgeries in this population. I think we need some details on this aspect before universally recommending surgical therapy as first line because surgeries are not a permanent cure for CD.
