

## **Reviewer 1**

1. Keywords: adequate. Please, remove the keyword case report.

I have removed the keyword case report.

2. the authors should address: Why didn't you insert the images of the first CT? It would be interesting to show the small bowel obstruction evaluated with CT, which is the gold standard method. If you have these images, could you add them? If you don't have them, that's not a problem.

Thank you for your kind suggestions. I have added these images as Figure 1.

3. In the text, I think it would be useful a deep-in discussion about the possibility of metastatic involvement in other gastroenteric tracts, e.g., duodenum. In this setting, you must read, discuss and cite the following article, which describe superlatively a similar case involving the duodenum: - Campanile F, Maurea S, Mainenti P, et al. Duodenal involvement by breast cancer. *Breast J.* 2012 Nov-Dec;18(6):615-6. doi: 10.1111/tbj.12034. Epub 2012 Oct 30.

Thank you for your kind suggestions. I have added this content in the second paragraph of the discussion.

4. In the discussion, I would refer to the possibility of multiple primary malignancies (MPMs), which occasionally can occur. I recommend that you read and discuss this interesting article about this topic: -Corvino A, Corvino F, Radice L, Catalano O. Synchronous mucinous colonic adenocarcinoma and multiple small intestinal adenocarcinomas: report of a case and review of literature. *Clin Imaging.* 2015 May-Jun;39(3):538-42. doi: 10.1016/j.clinimag.2014.12.019. Epub 2015 Jan 7. PMID: 25744428.

Thank you for your kind suggestions. I have added this content in the fifth paragraph of the discussion.

## **Reviewer 2**

This case report is interesting but should cite more references in recent years. I have tried my best to cite the latest references.
