### **SPECIFIC COMMENTS TO AUTHORS**

This is a case report about a *Ralstonia* infection in a 2-year-old child and successfully treated with antibiotics. However, there are some points needed to be improved to qualify this journal: 1. The timeline is a little bit confusing, the date should be written in the same form. 2. I am wondering what is the connection between the image (chest CT) finding in 2019-03 while the children was treated in 2019-02? 3. The special presentation of *Ralstonia* infection or the difference between *Ralstonia* pneumonia and other GNB pneumonia could be highlighted. 4. The explanation of the differential counts, such as WBC, NEU, LYM... should be mentioned in the first time they appeared. 5. Is there any suspicious infection source about this child?
