SPECIFIC COMMENTS TO AUTHORS

This is a good article, which has obvious reference significance for understanding the incidence of bone disease and its influencing factors in patients with chronic pancreatitis. However, there are many factors that can affect bone diseases, especially osteoporosis, including hormone levels, poor nutrition, outdoor activities, calcium supplements, excessive weight loss, and hormone use. If more factors could be analyzed, it would be even more helpful. In addition, it is suggested to discuss the causes and possible mechanisms of bone diseases induced by chronic pancreatitis in the section of discussion.
