## SPECIFIC COMMENTS TO AUTHORS

The case is very interesting and it shows a very rare association between both conditions. It has huge practical value and the authors have taken the right diagnostic and therapeutic decisions. The article also shows some subtleties in the diagnostic pathway. I have a few comments: First- patient's name, initials and personal information should be removed or hidden (in the informed consent). Second- all reference's numbers should be written according to the relevant journal's guidelines for writing references. Third- the Introduction and the Conclusion parts are too short.

## SPECIFIC COMMENTS TO AUTHORS

The paper Packed with Pills: Rare Case Report of Obstructing Duodenal Web in the Setting of Intestinal Malrotation tries to clear focus, make explicit and increase awareness to the reader of the rarer potential cause of nonspecific abdominal symptoms in adults, like intestinal malrotation due to duodenal web. Furthermore, I recommend the authors to take into consideration the following remarks, prior to publication: 1. Your abstract should be shorter and concise. 2. The paragraph alignment needs to be Justify. 3. Figure title should be under the image. 4. Remove the colon (punctuation mark) after each of you subtitles. 5. I recommend extending your research in the discussion part, in order to add a more comprehensive picture of the disease. 6. Even if Conclusions section is not mandatory, I recommend the authors to include it, in order to summarize and mention the future perspectives in the context of existing knowledge.
