## SPECIFIC COMMENTS TO AUTHORS

It is a review that examines the relationship between IPMN and CRC from various angles, and has interesting content. Write down what needs to be improved. 1. The introduction should clearly explain why the relationship between IPMN and CRC was considered. The “Relevant data concerning the association between IPMN and CRC” part that appears at the end of the paper should be brought to the front, about next to the introduction. 2. IPMN is sometimes mistaken for IMPN. Please check the details again.

### SPECIFIC COMMENTS TO AUTHORS

Major Comments: 1. Are there controversies in this field? What are the most recent and important achievements in the field? In my opinion, answers to these questions should be emphasized. Perhaps, in some cases, novelty of the recent achievements should be highlighted by indicating the year of publication in the text of the manuscript. 2. The results and discussion section is very weak and no emphasis is given on the discussion of the results like why certain effects are coming in to existence and what could be the possible reason behind them? 3. Conclusion: not properly written. 4. Results and conclusion: The section devoted to the explanation of the results suffers from the same problems revealed so far. Your storyline in the results section (and conclusion) is hard to follow. Moreover, the conclusions reached are really far from what one can infer from the empirical results. 5. The discussion should be rather organized around arguments avoiding simply describing details without providing much meaning. A real discussion should also link the findings of the study to theory and/or literature. 6. Spacing, punctuation marks, grammar, and spelling errors should be reviewed thoroughly. I found so many typos throughout the manuscript. 7. English is modest. Therefore, the
