

Dear Editor and Reviewers:

Thank you for your response and for reviewers' further comments concerning our manuscript entitled "**Pathophysiological consequences and treatment strategy of obstructive jaundice**" (Manuscript NO: 84556).

1) Authors aim to comprehensively discuss the pathophysiological changes and perioperative management of obstructive jaundice, which is a good topic, but the manuscript is somehow like a textbook. It is too well known to need elaboration.

Response: Thanks to the advice of experts. I have deleted some well-known content according to the opinions of the reviewers.

2) Relevant contents of "PTCD-based biliary stent placement" should be added.

Response: Thanks to the advice of experts. I have added content related to PTBS (PTCD-based biliary stent placement)

3) Relevant contents of "endoscopic metal biliary endoprosthesis" should be added.

Response: Thanks to the advice of experts. ERBD includes plastic and metal brackets, and I have also included SEMS related discussions in the manuscript

4) "Biliary stent combined with 125I particle intracavitary irradiation" and "drug-eluting stents" should be discussed.

Response: Thanks to the advice of experts. I have added the content of "Biliary stent combined with 125I particle intracavitary irradiation" and "drug-eluting stents".

5) Minor comments are marked inside the attached file.

Response: Thanks to the advice of experts. I have made minor revisions to the manuscript according to the opinions of the reviewers.
