SPECIFIC COMMENTS TO AUTHORS

1. The authors reported that the immunohistochemical markers have high sensitivity and low specificity and therefore, it may be challenging to diagnose large-cell NEC, where false-positive results may occur. Post-operative ultrasound images or computed tomography should be added. 2. P53 is a tumor suppressor gene, could you please explain why it is elevated in the neuroendocrine carcinoma of the endometrium concomitant with Lynch syndrome. 3. Serum CA 125, CA19-9, and SCC, please correct to be Serum CA 125, CA19-9, and SCCA.
