

## Answering Reviewers

We would like to thank the reviewers for their time and effort in reviewing our manuscript. The questions raised by the reviewers have been answered as below.

1. The clinical case report describes a case of drug-induced autoimmune hepatitis caused by Skullcap supplements. The novelty is that this is the first description in the literature of hepatotoxicity due to the use of supplements based on Skullcap. A case of hepatotoxicity of the cytolytic type in a 62-year-old woman with Sjögren's disease is described in detail. Adequate biochemical, morphological and histochemical methods were applied. The article has a practical applied nature. I recommend for printing.

We would like to thank reviewer #1 for their kind words and appreciate their time and effort in reviewing our manuscript.

2. In the introduction part author should be more elaborate write to national and international study to compared your current study

We would like to thank the reviewer #2 for their kind words and appreciate their time and effort in reviewing our manuscript. As per the reviewer's suggestion, we have elaborated on the introduction and included data from United States and well as International data to highlight the importance of DILI from Herbal and Dietary Supplements.

Yours truly,

Nimish Thakral, MD  
Assistant Professor  
Hepatology and Liver Transplant  
University of Kentucky, United States of America
