<input type="checkbox"/> Grade A: Excellent	<input type="checkbox"/> Grade A: Priority publishing	<input type="checkbox"/> Accept
<input type="checkbox"/> Grade B: Very good	<input type="checkbox"/> Grade B: Minor language polishing	<input type="checkbox"/> High priority for publication
<input type="checkbox"/> Grade C: Good	<input type="checkbox"/> Grade C: A great deal of language polishing	<input type="checkbox"/> Rejection
<input type="checkbox"/> Grade D: Fair	<input type="checkbox"/> Grade D: Rejected	<input type="checkbox"/> Minor revision
<input type="checkbox"/> Grade E: Poor		<input type="checkbox"/> Major revision

## JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

Exosomes are one of the trending topics in medicine and hepatology. Exosomes are among the proposed future targets in diagnosis and treatment of different diseases. Disorders like HCC, NAFLD and hepatic fibrosis (of whatever etiology) are the mostly targeted. Regarding the title; it is better to put the word "pathogenesis" instead of the word "etiology". Exosomes are playing in the pathogenesis of disease. The discussion of this subject in the present minireview was informative and comprehensive. The discussion covered the most important areas in this field. References are too many. the minireview is about 18 pages. References are 22pages. Figures are of informative and of good quality and properly lied down. So long it is not referenced or quoted from another source; I suppose it is original. Kindly state if not. The abbreviation HF" in medicine in general us commonly used for heart failure. So, kindly use "liver fibrosis at least in the subtitle. There should be a section of the abbreviations.
