Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 8793-review.doc).

Title: Cervical cancer screening: A never-ending developing program.

Author: Ciro Comparetto, Franco Borruto

Name of Journal: *World Journal of Clinical Cases*

ESPS Manuscript NO: 8793

The manuscript has been improved according to the suggestions of reviewers:

1 Revision has been made according to the suggestions of the reviewer

(1) **ESPS Manuscript NO:** 8793 page 1

(2) **RUNNING TITLE:** The organization of cervical cancer screening. page 1

(3) of HPV infection page 38

(4) if the vaccines last at least 20 years and the impact is not measured for at least 20 years. page 38

(5) after six decades of use, and assuming they last long enough or booster shots are given. page 38

(6) and must include continued cervical cancer screening. page 38

(7) ~~A degree of cross protection against certain other non-vaccine HR-HPV types was also observed.~~

The vaccine alone had no cross protection against certain other non-vaccine HR-HPV types. The +5 formulation was the only way to get protection from HPV 31, 33, 45, 52, and 58. page 39

(8) for one month. page 39

(9) Moreover, the vaccine is also approved by the European Agency for the Evaluation of Medicinal Products (EMA) in two doses, a significant advantage over the quadrivalent one, and is proven 93% effective at preventing CIN3 regardless of HPV type. page 40

(10) Among those women 20-29 years old in Australia who were of age to be screened, only 50% came for screening and only 30% who were vaccinated came for screening. Hence, there is a false sense of security among young women that if they are not vaccinated, they don't have to get screened because so many of their colleagues have been vaccinated and they are protected via herd immunity, and a false sense of security among the vaccinated women who misunderstand the protection afforded by vaccination to be complete cancer prevention. pages 40-41

(11) ETHNIC page 49

(12) In 2013 page 54

(13) 7.4 page 54

(14) Nevertheless, the LAST terminology has been rejected by the pathologists as a whole despite "recommendations". page 60

2 References and typesetting were corrected.

Thank you again for publishing our manuscript in the *World Journal of Clinical Cases*.

Sincerely yours,
