SPECIFIC COMMENTS TO AUTHORS

This review summarizes a wide range of meaningful content compactly and has academic significance. It is particularly significant that this review comes from China rather than Japan, where the development of endoscopic treatments is active. On the other hand, there are the following problems. I want the authors to reconsider. 1. There are no figures in this paper. Without illustrations, it would be impossible for non-experts to understand the content of endoscopic treatment procedures. All typical procedures should be illustrated. Of course, the illustrations should be newly and uniformly created by a professional medical illustrator rather than quoted or reproduced. 2. This paper is only an introduction to treatment techniques, so it would be difficult for readers to compare the methods. I want you to make a table summarizing the indications, results, advantages, and disadvantages. 3. Although this paper is devoted to a technical introduction of resection techniques, the target disease and indication for such treatment techniques are essential. The disease for which it is indicated should be mentioned. It is also important to note differences in the definition of early gastric cancer between Japan and the UICC.

SPECIFIC COMMENTS TO AUTHORS

Diagnosis of early gastric cancer is very important for surveillance. Organ-sparing surgeries are also very important for the quality of life of patients. This article provides collective information for interested physicians as it compiles minimal procedures.

SPECIFIC COMMENTS TO AUTHORS

I confirmed the addition of the table. I think it is well-organized and straightforward to understand. However, it isn't easy to interpret without a figure. You should draw up new Figures, which may be limited to typical techniques.
