JOURNAL EDITORIAL BOARD'S REVIEW REPORT

Name of journal: World Journal of Virology

Manuscript NO: 88487

Title: Hepatitis B virus reactivation in patients treated with monoclonal antibodies

Journal Editor-in-Chief/Associate Editor/Editorial Board Member: Shuai Gao

Country/Territory: China

Editorial Director: Jia-Ru Fan

Date accepted review: 2023-12-16 00:53

Date reviewed: 2023-12-16 00:59

Review time: 1 Hour

<input type="checkbox"/> Grade E: Poor	<input type="checkbox"/> Grade D: Rejected	<input type="checkbox"/> Major revision

JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

In this manuscript, the authors briefly explored the complex relationship between monoclonal antibody therapy and HBV reactivation, drawing upon current literature and clinical case studies. Overall, the manuscript is well prepared. The reviews' comments have also been answered properly.

JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

The manuscript must be edited by an academic professional, as the native English doctor who assisted you has used informal language that is not acceptable for publication in this Journal. For examples phrases like "we remember", and "we talk" should be revised. In some cases this has even led to scientific errors such as the mention of "liver decompensation and even liver failure". The manuscript should be checked for similarities with other previously published ones to ensure that this is kept to the minimum. The iThenticate report identified significant sections that need to be rewritten. The role of each author must be explicitly stated especially for those who specialize in medical subjects unrelated to the topic being reviewed. Certain scientific data should be presented more effectively. For example, the phrase "reverse HBsAg seroconversion OR reappearance of HBsAg", there's no "OR", they're the same thing. Similarly, the sentence "any dose corticosteroid therapy lasting less than a week" needs to be refined in language and its cited paper doesn't support "any dose". Numerous other papers argue against the inclusion of very high doses of corticosteroids. In the conclusion, the statement "we still can't accurately assess the risk of a new class of drugs prior

to its clinical application" is scientifically inaccurate and there's nothing in the discussion that supports it. Lastly, a section explaining the updates regarding the mechanisms of HBV reactivation should be added to enrich the discussion.

JOURNAL EDITORIAL BOARD COMMENTS TO AUTHORS

The minireview explores the complex relationship between monoclonal antibody therapy and HBV reactivation, drawing upon current literature and clinical case studies. It delves into the mechanisms underlying this phenomenon, highlighting the importance of risk assessment, monitoring, and prophylactic measures for patients at risk. The review was overall well organized and written.
