SPECIFIC COMMENTS TO AUTHORS

I congratulate you authors who performed a well-constructed review on the issue of management of obstructed colorectal carcinoma in an emergency setting. I think the paper is well written and will attract the readers of this journal. I want to provide a suggestion to Figure 2. Would you please list the clinical factors that should be considered in the choice among the three kinds of management?

SPECIFIC COMMENTS TO AUTHORS

This review summarizes the management of acute obstruction of colorectal cancer. However, the innovation of the paper is obviously insufficient.

SPECIFIC COMMENTS TO AUTHORS

Pavlidis et al. have made a nice review for the management of colorectal cancer with obstruction presentation. The paper was well written and provided necessary information for scientific community. Major concern: 1. The management options shown in Figure 2 are not very clear, it was recommend to be revised. 2. The discussion in section of “Other general considerations” was confusing, it was unclear what kind of considerations should keep in mind for the management of obstruction. 3. Are there any survival data for 2 cycles of preoperative chemotherapy for stenting as a bridge to surgery for ref. 72. 4. Some data which have presented in Table 1 could be refined in the paper. 5. Specific data would be presented in Table 2 and 3 rather than the word description such as better, similar or equivalent. 6. An additional table that summarized the advantages and disadvantages of tubing and stenting would be appreciated. 7. The summary for prognostic factors for the patients was chaos, I recommend the authors deleted some ref. like 114, 117.
