

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 90032

Title: Early Antiplatelet Therapy use for Acute Ischemic Stroke and Intracranial Hemorrhage

Provenance and peer review: Invited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 05346206

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: China

Author's Country/Territory: United States

Manuscript submission date: 2023-11-21

Reviewer chosen by: AI Technique

Reviewer accepted review: 2023-11-23 13:26

Reviewer performed review: 2023-11-26 14:32

Review time: 3 Days and 1 Hour

SPECIFIC COMMENTS TO AUTHORS

I'm not an expert on the subject. However, according to my clinical experience and scientific evaluations, the role and importance of aspirin use has been examined. From an editorial perspective, the way the subject is examined and its suggestions seem sufficient.

SPECIFIC COMMENTS TO AUTHORS

1. Previous clinical trials have shown the benefits of aspirin use within 48 hours of patients with Acute Ischemic Stroke. The harms or benefits of aspirin use for patients with hemorrhagic stroke still need to be clarified. 2. Although aspirin 300mg daily is given to patients with confirmed small-volume hemorrhagic strokes, this interesting finding still needs to be confirmed by a larger clinical trial. 3. Intracranial volume less than 30 ml on CT imaging, but the underlying bleeding area is dynamically changed. Determining the optimal timing of aspirin use is still a big challenge in clinical emergency settings.
