## SPECIFIC COMMENTS TO AUTHORS

I have some notes, in the introduction part that should be checked grammatically, and there must be a space between a word and brackets used for referencing. The highlights of the chosen article were written very well and discussing those newly founded notes was great. Great job wish you the best.

## SPECIFIC COMMENTS TO AUTHORS

1. The results and discussion section is very weak and no emphasis is given on the discussion of the results like why certain effects are coming in to existence and what could be the possible reason behind them? 2. Conclusion: not properly written. 3. The discussion should be rather organized around arguments avoiding simply describing details without providing much meaning. A real discussion should also link the findings of the study to theory and/or literature.

## SPECIFIC COMMENTS TO AUTHORS

This commentary doesn't include the studies which can highlight the impact of metabolic surgeries on diabetes in humans. There is lot of literature where diabetes had gone into remission post metabolic surgery but there was literally no mention of that in the commentary. I would suggest to include more human data in the commentary.
