SPECIFIC COMMENTS TO AUTHORS

Dear Authors, I have reviewed the manuscript titled "Therapeutic plasma exchange to rescue refractory autoimmune hemolytic anemia in a patient with systemic lupus erythematosus and ulcerative colitis: a case report". The manuscript presents a unique case of a patient with both ulcerative colitis (UC) and systemic lupus erythematosus (SLE). While the case report is informative, there are some areas that require attention and clarification: 1. Please provide a literature review of similar cases. 2. Add more background to pathology of both SLE and UC and how plasma exchange may be a therapeutic option 3. Organize the discussion and references properly and expand the cited literature Follow-up and Prognosis: While the manuscript mentions that the patient's condition improved and stabilized, it would be beneficial to include more detailed information about the patient's long-term follow-up and prognosis. Have there been any disease flares or complications since the initial presentation? Discussion: In the discussion section, discuss the potential mechanisms or hypotheses regarding the co-occurrence of UC and SLE. Are there any known shared genetic factors or immunological pathways that may explain this concomitant presentation? Offering
