

**Name of journal:** World Journal of Orthopedics

**ESPS manuscript NO:** 23076

**Title:** The use of Ligament Advanced Reinforcement System (LARS®) tube in Stabilization of Proximal Humeral Endoprotheses

Dear Editor,

We would like to thank the reviewers for their fruitful comments. The manuscript has been revised as per the reviewer's suggestions. Please find attached our responses to their remarks.

**Comment 1.**

Throughout the paper it mentions that there were 19 patients, but in the results section the authors mention: Twelve patients were right handed and one described himself as ambidextrous.

**Response**

We appreciate you brought that to our attention. The manuscript has been updated accordingly.

**Comment 2.**

Other limitations of the study would be: 1. The small sample size. 2. No patients were compared with and without LARS.

**Response**

The manuscript has been revised as per that comment

**Comment 3.**

If possible, update references to 2015

**Response**

References updated

Sincerely,

**Turcotte R.E. MD FRCS(c)**
