SPECIFIC COMMENTS TO AUTHORS

The author queried and read a large literature. The article lists the treatment methods of early intestinal neoplastic lesions in more detail. This article can give readers a more comprehensive understanding of endoscopic treatment of early colorectal neoplastic lesions. However, the format of some references is not correct, and some references only have the beginning page number without the final page number.

SPECIFIC COMMENTS TO AUTHORS

This topic is very interesting, this review contain a huge amount of data, we can called it huge review, it begins discussion from the bowel preparation til managemnt of patient complications after treatment, also the topic of artificial intelligence is discussed. some few comments are mentioned below: 1- Is there a role for EUS in the diagnosis and staging of colorectal lesions. 2- What about the use of the knife type (speed boat knife), also they use a different apparatus from that of ERBE. 3- What about the use of (over the stitch device) in the management of colorectal perforations. 4- Is it important to give a reference for the table and the figures. do you have permission to use it? 5- What about annotations, scale bar, magnifications, type of dye when needed in the legend of figures. 6- Language and grammar need polishing. Some corrections are present in the uploaded file. 7- Please choose one style for your references. Finally, this review can used as a reference for all doctors in the field of advanced GI endoscopy.

SPECIFIC COMMENTS TO AUTHORS

The authors report the review of latest topics of preparation of colonoscopy, endoscopic resection and AI system in colonoscopy. I found this paper to be well-written and engaging; however, some points require clarification. The issues that are listed below must be addressed before the paper can be considered for publication. 1. You need to correct the references 66-78, 80-86, 89–91, 97-98, 2. You need to delete (20) in P8, L18 3. There is a manuscript reporting the efficacy of continuous administration of anticoagulants with cold snare polypectomy. Please refer this article (Takeuchi Y et al. Ann Intern Med. 2019 Aug 20;171(4):229-237. doi: 10.7326/M19-0026.) 4. There are some latest reports of the prediction of deeply submucosal invasive carcinoma with use of AI. You may add these topics. Please refer these articles (Ito N et al. Oncology. 2019;96(1):44-50. doi: 10.1159/000491636. Epub 2018 Aug 21. Lui TKL et al. Endosc Int Open. 2019 Apr;7(4):E514-E520. doi: 10.1055/a-0849-9548. Epub 2019 Apr 3.)
