SPECIFIC COMMENTS TO AUTHORS

Congenital biliary atresia has a high incidence in children. Surgery is an important measure for the clinical treatment of congenital biliary atresia, in which hepatojejunostomy is more commonly used. How to carry out effective nursing intervention for the families of children with congenital biliary atresia has become a research hotspot. Narrative nursing is mainly for nurses to help them reconstruct the meaning of life and disease stories by listening to and absorbing the stories of the intervention objects. In this study, the application value of narrative nursing in the family of congenital biliary atresia children was explored. This study is designed well, and the results are very interesting. However, some minor language polishing should be revised. And the manuscript requires a carefully editing. Such as, abstract – purpose – “the family of (CBA) children with biliary atresia.”, this sentence should be “the family of children with CBA.”; abstract – results – “ ($P=0.000$, 0.000) ”, what’s the mean of this? Please check and make a revision or make a clarify, and also, some Chinese comma in the main text and tables should be revised.
