Dear editor,

Please find attached files of revised manuscript in word format

Title: Application of Narrative Nursing in the Families of Children with Biliary Atresia: Retrospective Study

Author: Lianghui Zhang, Hongyan Meng, Ren Wang, Youcheng Zhang, Jian Sun

Name of Journal: World Journal of Clinical Cases

Manuscript NO: 69702

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 06078855

Congenital biliary atresia has a high incidence in children. Surgery is an important measure for the clinical treatment of congenital biliary atresia, in which hepatojejunostomy is more commonly used. How to carry out effective nursing intervention for the families of children with congenital biliary atresia has become a research hotspot. Narrative nursing is mainly for nurses to help them reconstruct the meaning of life and disease stories by listening to and absorbing the stories of the intervention objects. In this study, the application value of narrative nursing in the family of congenital biliary atresia children was explored. This study is designed well, and the results are very interesting. However, some minor language polishing should be revised. And the manuscript requires a carefully editing. Such as, abstract - purpose - "the family of (CBA) children with biliary atresia.", this sentence should be "the family of children with CBA."; abstract - results - " (P=0.000、0.000) ", what's the mean of this? Please check and make a revision or make a clarify, and also, some Chinese comma in the main text and tables should be revised. Thank you for your advice.

After receiving the comments, we have refinished the language of the article and also revised some Chinese punctuation.

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Hongyan Meng
