

**Manuscript number 21732**

**Title:** role of microRNA in regulation of myeloma-related angiogenesis and survival

**Response to reviewers' comments:**

We thank the reviewers for their helpful comments and assessment of our manuscript. Below is our point-to-point response to the reviewers' comments.

Reviewer 00674619:

**Comment 1.** The Chapter “IMPORTANCE OF ANGIOGENESIS IN THE PATHOGENESIS OF MM” should be reorganized. It may contain a subchapter on therapy.

*Response:* We have enhanced the structure of the chapter, clarified its main messages, and separated out the discussion of therapy into a dedicated subchapter, as the reviewer suggested.

**Comment 2.** The authors should add a key illustration (table or figure or both) in their revised manuscript.

*Response:* as the reviewer recommended, we added two figure to the paper, which describe the interaction between tumor and stroma cells, and highlight the role of specific miRNAs in the regulation of pro-angiogenic factors in MM.

**Comment 3.** Also, it should be corrected errors in spelling by a careful reading of the authors.

*Response:* We carefully reviewed the paper and corrected the spelling errors. Thanks for the comment!

Reviewer 02097364

We thank the reviewer for the general positive consideration of our paper.
