Manuscript Review Result

Reviewed by 03537672

Manuscript Number	26306
Manuscript Title	Isolated Hepatic Perfusion for Unresectable Hepatic Malignancies: A Systematic Review and Meta-Analysis
Review Time	2016-04-14 10:54

Comments To Authors

1. This reviewer is afraid that the application of meta-analysis is appropriate. In view of critical differences in the primary diseases and the chemotherapy regimens, the value of the meta-analyses is extremely doubtful. Rather, simple review seems appropriate. 2. Some descriptions for technical aspects had better be presented. 3. Adverse events should be summarized.

Classification

- ☐ Grade A (Excellent)
- ☐ Grade B (Very good)
- ☒ Grade C (Good)
- ☐ Grade D (Fair)
- ☐ Grade E (Poor)

Language evaluation

- ☒ Grade A: priority publishing
- ☐ Grade B: minor language polishing
- ☐ Grade C: a great deal of language polishing
- ☐ Grade D: rejected
