Dear Editor,

This letter will confirm that the following manuscript for consideration in the World Journal of Nephrology: *What is The Optimal Level of Vitamin D in non-Dialysis CKD Population? Re-Evaluating Thresholds for Serum 25(OH)D Concentrations in Relation to Death, Kidney Progression and Hospitalization.*

included the clinical trial registration statement in the main text, as follows:

The clinical trial registry is not applicable to the OSERCE2 Study (Study of Mineral and Bone Disorders in Chronic Kidney Disease in Spain) because the study is observational in nature.

Should you require additional information, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink, consisting of a stylized 'J' and 'G' followed by a small dot and a horizontal line.

José L. Górriz
Principal Investigator
OSERCE2 Study
