Recent advances in the management of rectal cancer: No surgery, minimal surgery or minimally invasive surgery

Joseph M Plummer, Pierre-Anthony Leake, Matthew R Albert

### Abstract

Over the last decade, with the acceptance of the need for improvements in the outcome of patients affected with rectal cancer, there has been a significant increase in the literature regarding treatment options available to patients affected by this disease. That treatment related decisions should be made at a high volume multidisciplinary tumor board (MDT), after pre-operative rectal MRI and the importance of total mesorectal excision (TME) are accepted
