Yuan Qi

Badalona, March 21th, 2017.

Dear Dr. Qi

I would like to thank comments from the reviewers, which have improved the quality of our manuscript. Also I would like to thank you for the opportunity to submit a revision of our Editorial.

Following your instructions I answer reviewer comments:

- 1) We have defined and described more widely the endoscopic shielding technique. We have included this text in the introduction: "Shielding technique refers to the applyment of different biocompatible substances with proven biological activity, to cover the lesion after therapeutic endoscopy. There are different techniques to perform this procedure. All of them are simple and safe methods to perform shielding protection of the resected area, as a way to prevent delayed complications"
- 2) The use of abbreviations have been reduced in the text
- 3) References have been included
- 4) Affiliation data have been collected in the first page
- 5) Discussion has been modified to be less poor, but unfortunately conclusions section has to be concise.
- 6) Authors have added their personal opinion, based on our own experience, in the sense that gelling agents are the best candidates to perform shielding techniques.

Sincerely yours,

Vicente Lorenzo-Zúñiga , M.D., Ph.D.
