COMMENTS TO AUTHORS

The authors performed an extensive search of the literature enriched with their own experience about device-assisted colonoscopy and newer devices that can be used to increase the adenoma detection rate. I believe that the article is very informative for the experienced colonoscopist, who plans to incorporate some of these new techniques in his daily practice or at least for selected cases. Minor comments: Page 15, Line 7: Correct to "Israel" Figure 3. The newer type of endocuff should also probably be displayed in the picture.

COMMENTS TO AUTHORS

This article gives a detailed conclusion of different advanced technology endoscopes and add-on devices which may increase the detected rate of precancerous lesions. I believe this article can provide a good reference in the daily performance of endoscopists. But I still have some small advices: 1. Page 15 Line 7 "Israael" revises to "Israel" 2. The pictures of precancerous lesions under different endoscopes may be better to show up.
