Cardiovascular assessment in liver transplant for NASH patients: What we  
do, what we should do

Yolanda Sanchez-Torrijos, Javier Ampuero, Manuel Romero-Gómez

## Abstract

Non-alcoholic fatty liver disease (NAFLD) is increasing considerably due to the current lifestyle, which means that it is becoming one of the main indications for liver transplantation. On the other hand, there is a strong association between NAFLD and cardiovascular disease. This has been evidenced in many studies revealing a higher presence of carotid plaques or carotid intima-media thickness, leading to cardiovascular events and, ultimately, mortality. According to the liver transplant guidelines, screening for cardiovascular disease in transplant candidates should be performed by electrocardiogram and
