### COMMENTS TO AUTHORS

Present article appears to be more randomize than focusing on basic theme of study. Detailed description of data from individual studies in place of extracting clue from them and link the same to various such studies to draw final conclusion on each aspect, is lacking in this article. It needs to be re-written on the lines of a typical review article with a clear message for readers. At this stage it is a superficial presentation with little academic interest and needs rigorous changes.

### COMMENTS TO AUTHORS

Ladino et al described the clinical impact of direct antiviral agents on HCV patients with kidney diseases. This review article is well written and useful for readers.

### COMMENTS TO AUTHORS

The Abstract is informative and completely self-explanatory and point out major findings and conclusions. The purpose or purported significance of the article is explicitly stated. All Figures and tables are necessary and appropriate. They review current data and recommendations for the treatment of HCV-infected patients with chronic kidney disease, end stage renal disease and post kidney transplant. The writing is very good.
